Welcome to the NORTHERN ROCKIES COORDINATION CENTER

The **Northern Rockies Coordination Center (NRCC)** is the interagency focal point for coordinating the mobilization of resources for wildland fire, wildland fire use, prescribed fire and other all-hazard incidents throughout the Northern Rockies Area and, when necessary, for assignment throughout the United States. Located in Missoula, Montana, the Center also provides Intelligence and Predictive Services related-products to support wildland fire managers and firefighters in the decision making process throughout the Northern Rockies.

There are five primary components to the NRCC website.

- The [Incident Information](#) component is designed to provide the public and news media with general information on large wildland fires, fire restrictions and closures, and other relevant activity throughout the Geographic Area.
- The [Predictive Services](#) component provides operational products and links to incident situation information, maps, resources, current fire weather conditions, forecasts, fuels, fire behavior as well as daily, weekly and monthly fire weather/fire danger outlooks.
- The [Logistics/Dispatch](#) component provides detailed operation and information links for aviation, crews, equipment and overhead, including Incident Management Teams.
- The Administrative component provides fire and incident management tools and links including policies and reports, business management, safety, software applications, and training.
- The Related Links component provides links to related Internet websites within the Northern Rockies Area and nationally.
